

Business Opportunity

Alternative Supply of Day Old Chicks

2017-08

1 Objective

The objective of this document is to highlight the opportunity for businesses to incorporate the import and distribution of an alternative supply of quality and low-cost day old chicks in the Sierra Leonean poultry sector.

2 Background

2.1 SOBA¹

This market research and business opportunity development has been led by SOBA. SOBA's objective is to establish a sound basis and shared understanding of poultry sector investment opportunities in Sierra Leone. Ultimately, SOBA aims to facilitate growth and improve the efficiency and effectiveness of poultry production and processing in Sierra Leone.

2.2 Poultry Context

The poultry sector in Sierra Leone is emergent. A survey last year by SOBA² revealed that the total capacity of poultry farms was 151,000 hens. A more recent estimate of the sector ascertains that the present capacity is closer to 200,000 hens³. The hens are kept on farms of varying sizes. There are 3-4 farms with a capacity of more than 20,000 hens, some farms have a capacity of 5,000 to 20,000 hens, but most farms have less than 5,000 hens. The total current estimated number of farmers is 100.

This capacity does not satisfy the country's demand for eggs. The market is dominated by imports from Europe, India, and other countries. Previous surveys⁴ have concluded that 14 million eggs are imported into Sierra Leone every month, which accounts for 2/3 of the total egg consumption. These imports represent a considerable foreign exchange expenditure; currently imported eggs are more expensive than locally-produced options.

Sierra Leone is potentially capable of meeting demand requirements with locally produced options. This is particularly the case if production inputs, including day-old chicks, are readily available at a manageable cost.

1.3 Current situation: Day-old-chicks

Day old chicks are purchased from hatcheries or middlemen from Europe. Pluriton⁵, from the Netherlands, is the major supplier and brings in H&N breed of chicks. Due to having to make minimum orders of 15,000 day-old-chicks on Brussels Airways for imports from Europe, small farmers generally must collaborate in order to consolidate their orders. They generally do so via a large farm, such as Lanark or Leecon Poultry, that acts as an aggregator of orders, and as a distributor of day-old-chicks. This collaboration is ad-hoc and poorly planned, leading to long lapses where day-old-chicks are unavailable, interfering with poultry production cycles. This has led some farmers to purchase day-old-chicks from hatcheries in Guinea, but the quality of these chicks is inferior and production suffers as a result. In-country day-old-chick distribution networks are non-existent.

¹ Sierra Leone Opportunities for Business Action (SOBA) is a private sector development programme that uses a market systems approach to facilitate pro-poor economic growth in Sierra Leone. The programme collaborates with private sector businesses in three primary areas: (1) sustainable energy, (2) agriculture, (3) professional services and entrepreneurship markets, to trial and to scale innovative and inclusive business practices that reduce poverty and improve economic opportunities for poor women and men.

⁴ SOBA Poultry market overview and recommendation

⁵ Contact information for suppliers can be found in Appendix I at the end of this document.

2.4 Competition:

Pajah Hatcheries and Fisheries, a Sierra Leonean company, has attempted to supply day-old chicks from a local hatchery but had to stop due to inferior quality. They are now attempting this venture again. However, because of previous supplies of bad quality day old chicks, Pajah has a compromised reputation with poultry farmers of Sierra Leone, and through conversation with market actors who have had negative experiences, it is thought that they will not acquire market share due to quality and reputational issues.

Lanark, Leecon Poultry, and MDS Enterprises supply day old chicks to the poultry market on an ad hoc and as-needed basis only after consolidating large orders in congruence with their own needs.

2.5 Problem:

Currently one main supplier serves the market, with one breed of chick. It would be beneficial to the market to introduce another breed that is cheaper and at least of equal quality. Only large volumes are presently imported, and the timing of orders does not work with the timing of the poultry cycle for most farmers. There is no aggregator that can be more flexible in aggregating orders and serving the demand side of the market with reliable and high-quality day-old-chicks.

3 Opportunity

3.1 Opportunity Description

The opportunity is for an individual or enterprise to set up the import of a reliable flow of day old chicks into Sierra Leone from Europe at a quality at least equal to the present imports and at a lower price.

Pluriton is the current supplier from Europe, and their lowest price is €1.35 per chick for a quantity of over 15,000 chicks, with freight using Brussels Airways, whose minimum shipping size is 10,000 chicks. We suggest that a new aggregator switches to using KLM, who has begun direct flights to Freetown, at an expected price of €1.20 per chick.

Critically, **KLM will accept lower order sizes of 5,000 chicks** (compared to 15,000 from Brussels Airways). This is important as it allows an aggregator to be able to place smaller orders while still maintaining a low price. This has the benefit of being able to adapt to the demand cycles of poultry farmers.

The alternative supplier that SOBA's poultry expert recommends is Verbeek Hatcheries from the Netherlands, Novogen Brown breed. This supplier has the following advantages:

- They own their parent stock
- They have substantial market share in the Netherlands
- They currently export to many African countries
- They are very interested to enter the Sierra Leonean market

Novogen Brown has the following advantages:

- It is highly productive
- It has a quieter behavior than competitor breeds, so they do not need to be further debeaked after a laser treatment of the beak in the hatchery

It is expected that the cost per Novogen Brown chick using KLM including freight to Freetown, laser debeaking and vaccinations would be €1.17 - €1.22. The competition (importing H&N chicks from Pluriton) generally imports at a cost on average of €1.30-€1.90 per chick. There would be significant market advantages. According to primary sources⁶, the day-old-chick import and distribution business can expect to garner **15% net profit margins**.

In order to pilot this initiative, it would be most beneficial if this opportunity was done by a company already operating within Sierra Leone's poultry industry: distributing day old chicks at some capacity, or poultry feed concentrate. That way the company could leverage their already-extant farmer networks to consolidate first

⁶ SOBA Poultry Expert – Business Case for Poultry Inputs (2017)

phase orders. A pilot project assessing the viability of the Novogen Brown breed of chicks should be undertaken before this breed can be imported at scale.

3.3 Required Investment

Companies interested in this business case must invest their time and effort into setting up an import structure from Verbeek Hatcheries. Interested parties must negotiate on price and technical support from Verbeek Hatcheries themselves. Companies must be willing to extend resources in setting up space and providing the necessary and due care for a pilot project for Novogen Brown breed.

4 Next Steps

4.1 Traction and Validation Roadmap

- ✓ Linked to Verbeek Hatcheries (Contact details below)
- ✓ Negotiation on price and shipping terms with Verbeek Hatcheries, ensuring air freight on KLM
- ✓ Designing the pilot program to test Novogen Brown’s suitability in Sierra Leone’s climate
- ✓ Designing an efficient order consolidation system to scale orders
- ✓ Distribution planning
- ✓ Marketing and Sales planning⁷

5 Additional Opportunities

Companies should consider providing value-added support to farmers who purchase their day-old chicks. This could include bundling in medicines and vaccines and providing technical support on best rearing and housing practices.

As part of value-added services veterinary services could also be provided. Please see SOBA’s business opportunity for Veterinary Services available at www.sobasl.org.
